

Latin fixture page 1

The cycle time of a graph is the ratio that matters here.

A minimum mean cycle is found by iterating over every cycle.

Redaction must destroy content, not merely cover it.

Selection follows the reading order of the text, not the page.

Latin fixture page 2

The cycle time of a graph is the ratio that matters here.

A minimum mean cycle is found by iterating over every cycle.

Redaction must destroy content, not merely cover it.

Selection follows the reading order of the text, not the page.

Latin fixture page 3

The cycle time of a graph is the ratio that matters here.

A minimum mean cycle is found by iterating over every cycle.

Redaction must destroy content, not merely cover it.

Selection follows the reading order of the text, not the page.
